

MOHAMMED SHAHAN *Software Engineer*

✉ mohamadshahan@gmail.com ☎ 9741234998  moshahan786  MoShahan

Profile

Frontend Engineer with 4 years of professional experience building scalable web and mobile applications using React, TypeScript, Next.js, Vue.js, Angular, and React Native. Experienced in architecting fintech solutions, including loyalty programs, gift vouchers, and membership management systems. Beyond frontend, proficient in full-stack development through hands-on practice with PostgreSQL, MongoDB, Prisma, and Express for building RESTful APIs. Passionate about delivering high-performance UIs and clean, maintainable code.

Skills

Frontend — Angular | React | Vue.js | TypeScript | Next.js | React Native

Backend — Express.js | Python | REST APIs

Database — MongoDB | PostgreSQL | Prisma

Tools — Git | GitHub Actions | Jest

Experience

Product Development Engineer I

Razorpay

May 2024 – April 2026

Bangalore, India

- Architected and shipped frontend modules for a large-scale fintech loyalty platform using React, TypeScript, and Angular, enabling gift vouchers, premium memberships, and exclusive promotional offers for banking partners across India.
- Built reusable React and TypeScript component libraries to standardize UI patterns across the loyalty platform, reducing development time for new features.
- Integrated REST APIs for automated offer fulfillment and membership lifecycle management, improving reliability of partner onboarding flows.
- Collaborated with cross-functional teams to design and deliver end-to-end features from requirement scoping to production deployment.

Associate Software Engineer

Cognitive Clouds

September 2022 –

May 2024

Bangalore, India

- Developed and maintained high-traffic web and mobile applications for multiple clients using React, Vue.js, and React Native with TypeScript.
- Implemented responsive, accessible UI components optimized for performance across web and mobile platforms.
- Adopted Jest-based testing and code coverage tools to ensure stability of frontend components across releases.
- Onboarded as a Trainee and promoted to Associate Engineer within 5 months based on consistent delivery of production-ready features.

Front End Developer - Trainee

Cognitive Clouds

- Completed professional training in React and React Native, focusing on building high performance, cross platform applications.
- Mastered TypeScript to implement robust type checking and improve code maintainability across complex frontend architectures.
- Adopted industry standard testing methodologies and code coverage tools to ensure the reliability and stability of UI components.

April 2022 –
August 2022
Bangalore, India

Web Application - Front End Team

First Kampus (Internship)

- Collaborated within the front end team to architect and build a comprehensive web application dedicated to streamlining campus placement processes.

September 2021 –
August 2022
Mangalore, India

RPA Using UiPath

Novigo Solutions (Internship)

- Engineered a suite of automated workflows using UiPath Studio to optimize repetitive business processes and enhance operational efficiency.
- Developed and deployed attended and unattended bots, focusing on data extraction, web automation, and seamless application integration.

August 2021 –
October 2021
Mangalore, India

Education

Bachelor of Engineering in Computer Science & Engineering

PA College of Engineering

CGPA - 8.69/10

August 2018 –
July 2022
Mangalore, India

Projects

HiLite Sales

Tech: React, PostgreSQL, Prisma, Express

- Multi-tenant Sales ERP with org-isolated users, teams, and RBAC
- Features - Role-scoped dashboards, customizable widgets, in-app notifications, append-only audit trails and cookie-based auth (access + refresh).
- Built as a TypeScript monorepo with shared Zod schemas and row-level tenant isolation.

June 2026 –
August 2026

Kanban Task Board

Tech: React, TypeScript, Vite, Tailwind CSS

- Local Kanban board for planning and tracking work, with tasks and theme persisted in localStorage (no backend)
- Features - drag-and-drop and arrow moves across To do / In progress / Done, add/edit/delete modals, title search, sort by title or due date, overdue highlighting, and light/dark theme

August 2026 –
August 2026

Aget.Co

Tech: Next.js, TypeScript, Material UI, Firebase Auth, Jest

- Built a responsive e-commerce storefront with catalog search, category filters, cart, wishlist, and checkout, using a public product API and Firebase email/password auth gated by Next.js middleware.

February 2025 –
February 2025

Comic Reader App

Tech: React Native, Expo, TypeScript, SQLite, Zustand

- Engineered a local-first Expo/React Native comic reader with CBZ import, a filterable cover library, and resume-from-last-page reading without a backend.
- Architected SQLite schemas and Zustand state to persist progress, spread half, favorites, and settings across app restarts.
- Implemented chunked CBZ extraction and a windowed pager so large issues stay memory-safe, with pinch-zoom, auto-split spreads, and keep-awake while reading.

August 2026 –
August 2026

Dovemed MyCircles

Tech: Vue.js 2, Django, REST

- Built the Vue 2 frontend for MyCircles, DoveMed's health community. Patients, caregivers, physicians, advocates, and hospitals join condition-specific circles to share posts, comments, and resources. Implemented role-based UI, feeds, and profiles on top of Django REST APIs, with light backend support when frontend work was blocked.

September 2022 –
May 2024

Dovemed MyCircles

Tech: React Native, Django, REST

- Built the React Native iOS/Android app for the same MyCircles platform. Brought circle feeds, posting, comments, and role-based profiles to patients and healthcare professionals on mobile, using the shared Django REST APIs. Focused on native navigation, list performance, and mobile UX rather than duplicating backend logic.

September 2022 –
May 2024

MockBook

Tech: Next.js, Express.js, MongoDB, Redux

- Engineered a full-stack social media application utilizing Next.js 13 and the MERN stack (MongoDB, Express, React, Node.js).
- Architected complex state management using Redux with Redux-Persist to ensure data continuity and persistent user sessions.
- Developed RESTful API endpoints and integrated database schemas to handle dynamic content delivery.

September 2023

Youtube 2x

Tech: JavaScript, browser extension APIs, Chrome DevTools

- Designed and deployed a custom browser utility to optimize YouTube's playback interface, reducing navigation friction by implementing a one-click speed toggle.

February 2026 –
February 2026

Kerala Gold Rate

Tech: Python, GitHub Actions, Telegram Bot API

- Built a Python-based scraping engine to monitor daily market fluctuations in the Kerala gold market.
- Engineered a serverless CI/CD pipeline via GitHub Actions to execute daily cron jobs, delivering formatted financial updates to users via the Telegram Bot API.

February 2026 –
February 2026
